

Supplementary Table 2. Endoscopic Screening Reports in National Cancer Screening Program

	Endoscopic finding	Diagnosis	Explanation	Recommendation
Finding	Normal/gastritis/suspected gastric cancer Early gastric cancer/advanced gastric cancer Benign gastric ulcer/gastric polyp/gastric subepithelial tumor Others: any of esophageal or duodenal lesion			
Site	Antrum/body/fundus/cardia Lesser curvature/ greater curvature/anterior wall/posterior wall			
Final diagnosis in gastric cancer screening (combination of endoscopic and pathologic results)				
1		Normal	No abnormal finding	Regular endoscopy
2		Benign disease	Benign gastric disease/gastric adenoma/gastric subepithelial tumor	Case by case
3		Suspect gastric cancer	Endoscopically suspected gastric cancer but not pathologically confirmed. Pathologically suspected but not conclusive to gastric cancer (such as atypical gland)	Need to follow-up endoscopy and biopsy
4		Gastric cancer	Pathologically confirmed gastric cancer	Need to treatment
5		Others	Cancer of esophagus or duodenum Subepithelial tumor in esophagus or duodenum Benign disease in esophagus and duodenum	Case by case
Previously diagnosed with gastric cancer				
0		No	Never diagnosed as gastric cancer	
1		Yes	Previously diagnosed with gastric cancer
